

D365 - “Salutations”

Third Step: Create a plugin in Microsoft Visual Studio

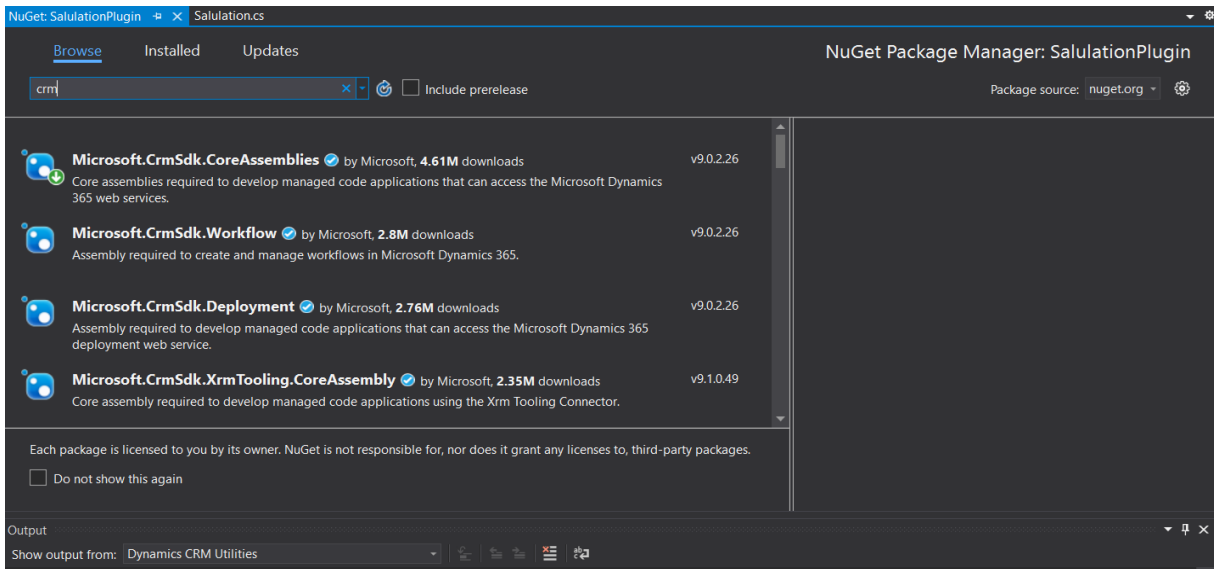

1. Open Microsoft Visual Studio, and select a new project.
2. Select a **c# Class Library (.Net Framework)**

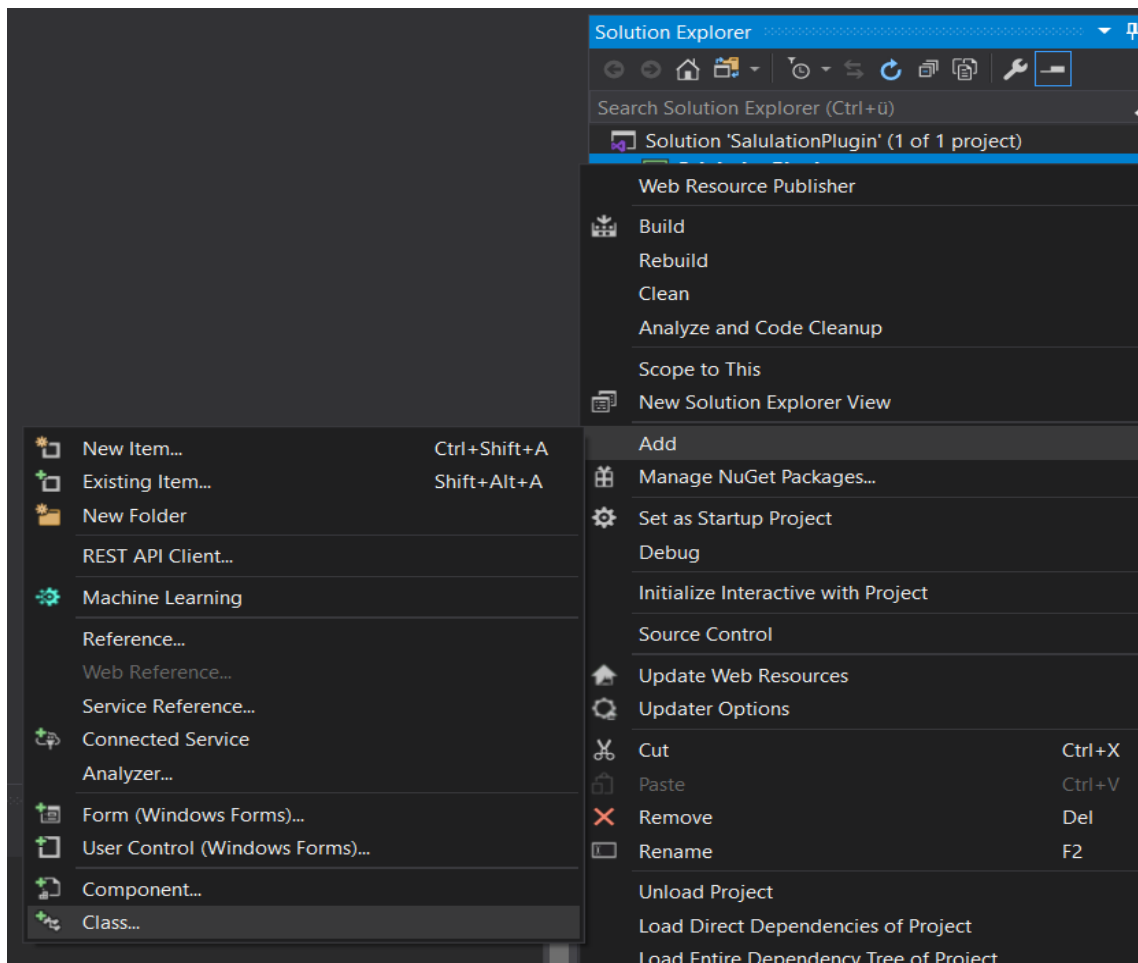

3. Right click on the project and select **Manage NuGet Packages...**

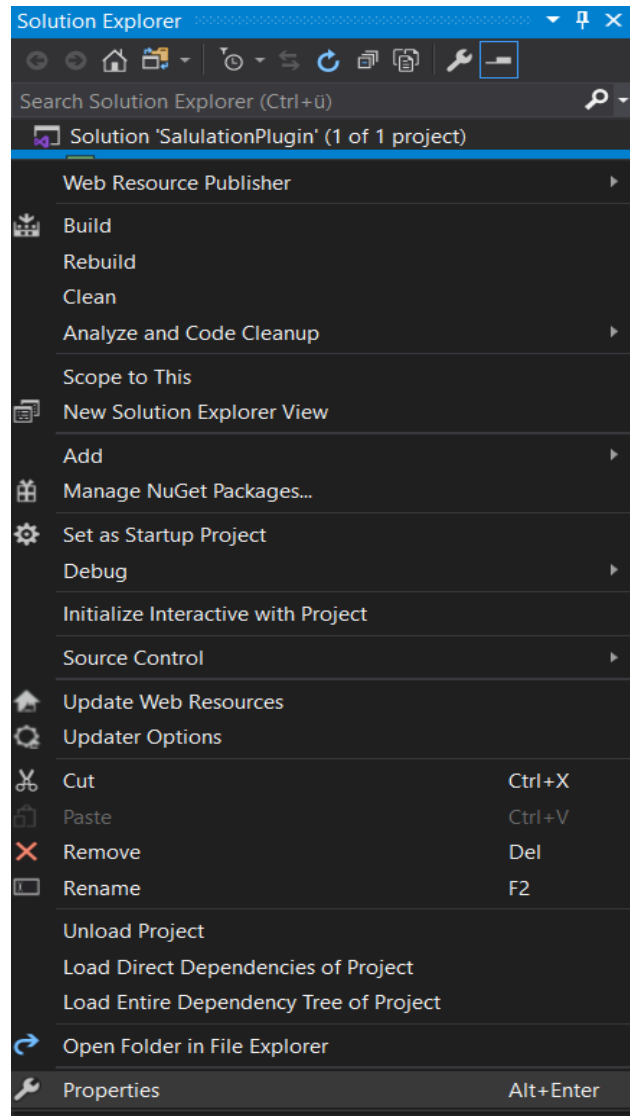

4. Install *Microsoft.CrmSdk.CoreTools* and *Microsoft.CrmSdk.CoreAssemblies*

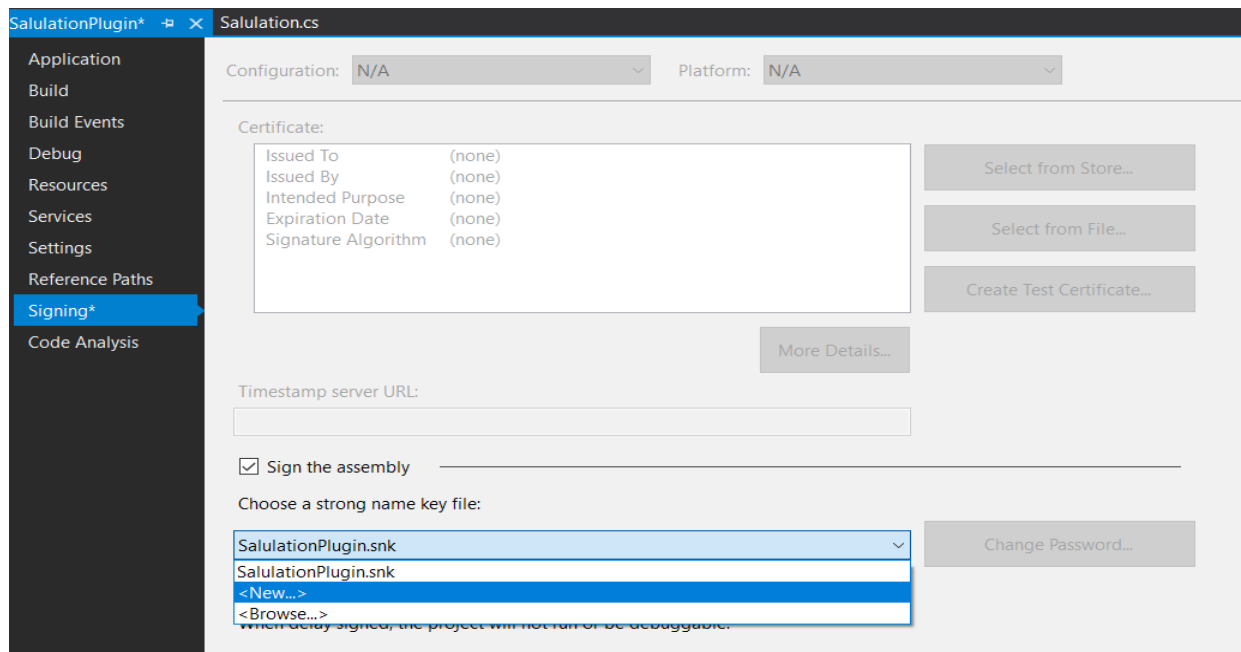

5. Add a new class and give the class a name

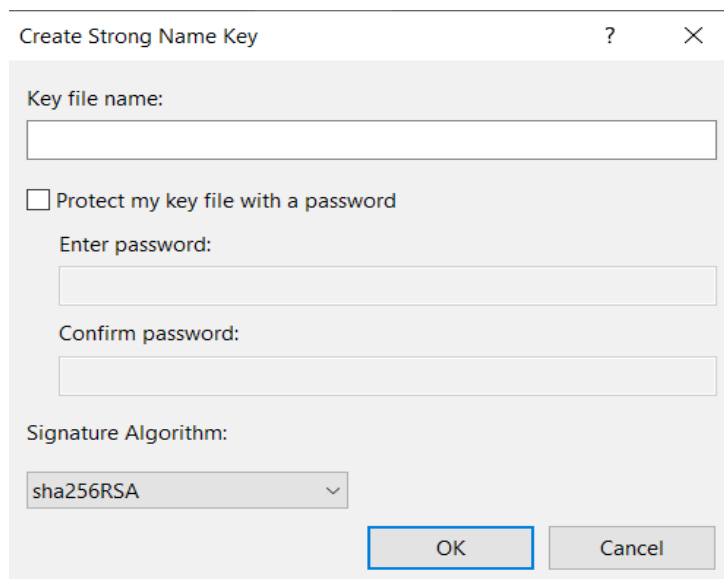

6. Insert the code for the plugin
7. Right click on the project and select **Properties**

8. Select **Signing**
9. Select **Sign the assembly** and choose *new*

10. Give the plugin a name
11. uncheck the box ***Protect my key file with a password***

12. Click on **OK** button
13. Microsoft Visual Studio will create a file in your solution project.
